No-Loss Shipping Procedure

It is always possible that a package may be subjected to rough handling during shipping. Even a small tear or loose seam can result in a significant loss of button batteries during shipping. Therefore, Watch Battery Buyers suggests the following steps for battery shipments:

- Batteries should be contained in a heavy duty plastic bag which is securely tied closed with most of the air removed.
 - Do not use zipper-lock bags, which tend to open under rough handling.
- Place the plastic bag inside a standard double-walled cardboard shipping box a little larger than the plastic bag.
- Always place a copy of your contact information inside the box, in case anything happens to the label.
- All seams of the box should be taped shut.
- Print out your Pre-Paid UPS label with a laser or thermal printer and tape the label onto the box according to the instructions on the label.
- Make a note of the tracking # on the label.
- Hand the box to your UPS delivery driver or take the box to your local UPS drop-off point.

Following these steps will help ensure that your batteries arrive at our facility with minimum potential for losses during shipping. Watch Battery Buyers is not responsible for losses due to improperly packaged batteries.
